I'm Nrupathunga G, residing in Bangalore, and I'm passionate about carving a career path that not only presents challenges but also fosters continuous learning and problem-solving. My academic journey includes completing an MCA from R.V. College of Engineering and a BCA from Oxbridge College. These experiences have equipped me with a robust technical skill set in various programming languages and operating systems, including but not limited to C, C++, Java, Python, and several Linux variants. My practical skills are further exemplified by my involvement in a range of projects, where I tackled areas such as CPU scheduling, database management, SQL queries, routing protocols, and network simulation.

Beyond the confines of academia, I have amassed over a decade of experience in freelance computer troubleshooting and service. This path has honed my versatility and technical prowess. Since 2015, I've taken up the mantle as the head of the Computer Science department at G T Institute of Management Studies and Research. Here, I not only manage computer labs and networks but also conduct workshops on contemporary topics like Big Data, Python programming, and cloud computing.

My interests and abilities are not just limited to the technical field. I have actively participated in various extracurricular activities, including state-level sports, social awareness programs, and even the National Cadet Corps, reflecting my diverse range of interests. My career has also seen me embracing roles as an assistant professor in various colleges and mentoring BCA students, underscoring my deep commitment to education and nurturing young minds. Personal traits like adaptability, a keen ability to learn quickly, and unwavering dedication have been the cornerstone of all my pursuits, professional or otherwise, which include hobbies like gaming and badminton.
